Allowable Subject Matter

Claims 1-27 are allowed. For the purposes of allowance the original numbering of the claims has been changed.

The following is an examiner's statement of reasons for allowance:

The general concept of enhancing an audio signal through filtering a frequency range of the signal and scaling that filtered range was known in the art as evidenced by Aarts et al (US 6111960). However, the examiner has not found prior art that teaches or suggests the modification of Aarts in order to provide a dividing of the filtered frequency range using a segmenting unit into time-segments that are replicas of the selected filtered audio signal frequency range, wherein the time segments are defined by zero crossings of the filtered audio signal, as defined in the independent claims 1 and 13. Other prior art has been cited herein regarding audio signal enhancement of selected frequency ranges. However the other prior art of record also fails to teach or provide suggestion to arrive the combination of the elements and steps presented in the independent claims, again when said elements or steps are collectively considered in regards to each claim. For at least the reasons listed above, the dependent claims are also allowed in view of their dependency upon the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Motohashi et al (US 6845165 B1) discloses an acoustic effect apparatus and method and program.

Aarts et al (US 2003/0044024 A1) discloses a method and device for processing sound signals.
